

Wesley Santos

Full Stack Developer | Frontend, Node.js, and End-to-End Products

Guarulhos, São Paulo, Brazil | (11) 99314-2973 | wesleysantosdev@outlook.com

linkedin.com/in/wesleysantosdev | github.com/wesleysantosdev

Professional Summary

- Full Stack Developer with a strong frontend background and approximately four years of experience building web applications, internal systems, and customer-facing products.
- Deliver end-to-end solutions by translating business needs into technical decisions, interfaces, REST APIs, data models, integrations, deployments, and production support.
- Work autonomously in lean teams, communicate directly with stakeholders, and apply quality practices such as automated testing, Spec-Driven Development (SDD), and coding-agent-assisted workflows.

Technical Skills

- **Frontend:** React, Next.js, Vue.js/Vue 3, TypeScript, JavaScript (ES6+), HTML5, CSS3, responsive design, web accessibility, state management, and REST API integration.
- **Backend and Data:** Node.js, Express.js, RESTful APIs, authentication and authorization, JSON Web Token (JWT), Prisma ORM, PostgreSQL, Redis, relational data modeling, and business rules.
- **Testing and Quality:** Jest, Vitest, Testing Library, unit and behavior testing, Test-Driven Development (TDD), safe refactoring, and automated quality gates.
- **Cloud and Delivery:** Docker, GitHub Actions, Continuous Integration/Continuous Delivery (CI/CD), Microsoft Azure, Azure Web Apps, Azure Blob Storage, VPS, Caddy, HTTPS, reverse proxy, and Cloudinary.
- **Practices and Tools:** Git, GitHub, Postman, Swagger/OpenAPI, System Design, requirements gathering, technical feasibility analysis, technical documentation, SDD, Harness Engineering, AI Skills/Tools Creation, and LLM Orchestration.

Professional Experience

Freelance Full Stack Developer — Mar 2026 – Present

Remote — Client projects

- Lead full stack projects from problem discovery and scope definition through frontend, backend, database, integrations, deployment, and solution evolution.
- Develop products using Vue 3, React, TypeScript, Node.js, Prisma ORM, PostgreSQL, Redis, and Docker while accounting for business requirements and external-system constraints.
- Structure coding-agent-assisted workflows with living specifications, traceable tasks, tests before implementation, and automated quality checks before delivery.

DASS Desenvolvimento, Análise e Sustentação de Sistema Web – Dassweb — Aug 2022 – Mar 2026

Full Stack Developer with a Frontend Focus — Guarulhos, SP, Brazil

- Took ownership of the most complex demands within a lean team and delivered web applications, SaaS platforms, internal systems, and websites from requirements through production support.
- Designed responsive and accessible interfaces with React, Vue.js, and TypeScript, prioritizing usability, performance, and consistency across desktop and mobile devices.
- Implemented REST APIs, authentication, validation, state management, error handling, and data synchronization using Node.js, Express.js, Prisma ORM, and PostgreSQL.
- Modeled relational structures and production business rules, integrated external services, and validated technical decisions directly with stakeholders.
- Containerized applications with Docker and maintained CI/CD and deployment pipelines using GitHub Actions, Azure Web Apps, and Azure Blob Storage, ensuring consistency across environments.
- Implemented unit and behavior tests with Jest and Vitest, supporting safe refactoring, regression reduction, and continuous product maintenance.

Selected Projects

Shrten – URL Shortener and System Design Study — Public personal project in production, 2026

- Designed a full stack service with React, Node.js, PostgreSQL, Prisma ORM, and Redis, generating Base62 codes from BIGINT IDs through reversible permutation without duplicate code storage or collision queries.
- Implemented positive and negative cache-aside, PostgreSQL fallback, atomic rate limiting with Lua in Redis, and HMAC-SHA-256 anonymized IPs; containerized the application and automated CI/CD on a VPS with Caddy and HTTPS.
- Product: shrten.pro | Repository: github.com/wesleysantosdev/url-shortener

Paglias – B2B Channel Integrated with SIGE Cloud — Professional project, 2025

- Structured a B2B journey using Vue 3 and Node.js that validates customers through CPF/CNPJ identifiers and retrieves from SIGE Cloud the conditions required to build the catalog and process orders, keeping the ERP as the single source of truth.
- Rebuilt and validated orders in the backend, implemented retries with progressive delays for temporary integration failures, and integrated Clouinary with persisted identifiers, preserving consistency and preventing repeated transfers.

Agente TeleHelp – Commercial Referral Management — Professional project, 2025

- Digitized and centralized the referral process using Vue 3, Node.js, Prisma ORM, and PostgreSQL, creating separate areas for agents and administrators, multiple sales statuses, and a change history.
- Implemented authentication, role-based permissions, validation, and protection of sensitive data, along with filters and a consolidated view to ensure traceability and monitoring without manual inquiries.

TeleHelp Senior Academy – Educational Platform — Professional project, 2024

- Transformed a static page into a manageable platform with authentication, roles, an administrative dashboard, segmented catalogs, reservations, and participation records, enabling the client to manage classes without code changes.
- Modeled users, organizations, and content and integrated the Zoom Meeting SDK, investigating compatibility and adjusting the flow between frontend, backend, and SDK to enable live classes directly within the platform.

Education

Anhanguera Educacional — Aug 2021 – Jun 2023

Technology Degree in Systems Analysis and Development — Brazil

Languages

- **Portuguese:** Native | **English:** B2 – EF SET Certified
